#### Search

#### **Create Filter**

#### Scenario of Use

- Peter enjoys articles posted by friends on Facebook.
- But with so many statuses and shares by others it is difficult to follow just the articles.
- Using feedMe, Peter adds his friends.
- Peter is now able to see their feeds and all the news sites they are subscribed to.
- At the same time Peter is still able to browse the content he is subscribed to

#### Scenario of Use

- Donna Moss enjoys Josh's taste in music and Toby's choice in webcomics.
- However, she does not like Josh's political views and Toby's preferences in music make's her think he may be tone deaf.
- After subscribing to Josh and Toby on feedMe she sets up filters for their feeds.
- Now Donna only see's the content they are interested in and that Donna also enjoys.

#### **Non-Goals**

- Communication/messaging between users.
- The ability to post original content.
- Offline access to content.
- No "total" social networking integration (Facebook, Myspace, etc.)
